Foreword	<i>xv</i>
Acknowledgments	<i>xvii</i>
About the Technical Reviewer	<i>xix</i>

Chapter 1: Introduction1

What Is WSH?	<i>1</i>
COM Automation	<i>2</i>
Version 2.0 Features	<i>4</i>
Scripting Components	<i>12</i>
Streams, Standard Input and Output, and Piping	<i>35</i>
Additional Resources	<i>37</i>

Chapter 2: Shell Operations39

2.1 Reading the Command-Line Arguments	<i>39</i>
2.2 Reading an Environment Variable	<i>46</i>
2.3 Creating or Updating an Environment Variable	<i>48</i>
2.4 Deleting an Environment Variable	<i>51</i>
2.5 Running Applications	<i>52</i>
2.6 Accessing Windows-Related Folders	<i>58</i>
2.7 Creating a Windows Shortcut	<i>60</i>
2.8 Displaying a Message Prompt	<i>62</i>
2.9 Sending Keystrokes to Applications	<i>65</i>

Chapter 3: Logon Scripts and Scheduling69

3.1 Connecting Network Resources at Logon	<i>69</i>
3.2 Scheduling Scripts	<i>76</i>
3.3 Displaying a Logon Message	<i>82</i>
3.4 Performing Operations Based on Group Membership	<i>90</i>
3.5 Creating an Inventory of Computers at Logon	<i>97</i>

Chapter 4: Networking Resources	103
4.1 Identifying a User	103
4.2 Finding an Available Network Drive	104
4.3 Mapping Network Drives	106
4.4 Migrating File Services from One Server to Another Server	108
4.5 Connecting to a Network Printer	111
4.6 Listing Connected Network Printers	113
4.7 Disconnecting Network Printers	114
 Chapter 5: File Operations	 117
5.1 Determining the Readiness of a Floppy Drive	118
5.2 Listing the Drives on a System	120
5.3 Finding the Size of a User Directory	121
5.4 Determining the Size of a File	123
5.5 Reading and Changing File Attributes	124
5.6 Determining the Existence of a File or Folder	127
5.7 Renaming a File or Folder	128
5.8 Comparing Files by Version Number	129
5.9 Creating a Folder	131
5.10 Finding and Deleting Temporary Files	133
5.11 Finding Files That Meet Criteria	136
5.12 Deleting a Folder	140
5.13 Copying a File	141
5.14 Copying and Moving a Folder	143
5.15 Deleting a File	144
5.16 Creating and Writing to a Text File	145
5.17 Opening and Reading a File	147
5.18 Updating a Text File	149
 Chapter 6: Input/Output Streams	 153
6.1 Using Regular Expressions to Filter the Contents of an Input Stream	153
6.2 Reading Keyboard Input	159
6.3 Generating Template-Based Data	160
6.4 Creating Multiple-User Prompts	166

Chapter 7: Registry Operations171

7.1 Reading a Value from the Registry	172
7.2 Writing a Value to the Registry	176
7.3 Deleting a Registry Entry	180
7.4 Listing the Registry Key Values	182
7.5 Searching and Replacing Registry Values	184
7.6 Accessing the Remote Registry	188

Chapter 8: Regular Expressions191

8.1 Validating a String	192
8.2 Matching Multiple Patterns	199
8.3 Matching Subexpressions	202
8.4 Replacing Values	207

Chapter 9: Application Automation211

9.1 Creating Formatted Word Documents	211
9.2 Identifying Office Documents by Their Properties	223
9.3 Importing Data into Excel	227
9.4 Generating Thumbnail Images for Web Pages	236
9.5 Building Web Page Rollover Images	240
9.6 Generating Electronic Copies of Access Reports	242

Chapter 10: Network Administration/WMI245

10.1 Accessing Information about a Computer	247
10.2 Determining the Role of a Computer	259
10.3 Obtaining IP Information	261
10.4 Changing the Location of an NT Dump File	271
10.5 Setting TCP/IP Information	275
10.6 Inventorying Computer Components	284
10.7 Executing Generic WMI Queries	288
10.8 Changing Environment Variables	294
10.9 Terminating a System Process	296
10.10 Starting an Application on a Remote Computer	300
10.11 Compressing Folders and Files	303

10.12 Copying Files on a Remote Computer	306
10.13 Rebooting a Computer	310
10.14 Checking the Event Viewer for Unauthorized Access	314
10.15 Backing Up Event Viewer Events	321
10.16 Processing Event Viewer Events	323
10.17 Changing NT Service Account Information	327

Chapter 11: Internet Applications331

11.1 Retrieving HTML Data	331
11.2 Displaying HTML	336
11.3 Displaying an HTML Logon Message	341
11.4 Creating an HTML Form	345
11.5 Enumerating HTML Elements	350
11.6 Creating a GUI Menu	358
11.7 Transferring Files Using FTP	361
11.8 Domain Name Resolution	367
11.9 Pinging a Computer	369
11.10 Sending an MSN Messenger Message	371

Chapter 12: Messaging Operations383

12.1 Logging On	385
12.2 Determining the Default Profile	389
12.3 Sending Anonymous Mail	390
12.4 Running Message Scripts Using NT Scheduler Service	392
12.5 Creating a Mail Message	395
12.6 Setting Message Properties	397
12.7 Creating Message Recipients	399
12.8 Sending the Message	402
12.9 Using a Command-Line Script to Send E-mail	404
12.10 Checking the Event Log	410
12.11 Getting Computer Status Notification	412
12.12 Using the Process Monitor Event	413
12.13 Attaching Files to a Message	415
12.14 Processing Messages	418
12.15 Filtering Mail	420
12.16 Extracting Attachments	423
12.17 Using a WSH Script Mail Agent	424
12.18 Retrieving a Folder	430

12.19 Posting Messages to an Exchange Server	
Public Folder	435
12.20 Creating Folders	436
12.21 Copying or Moving Messages	438
12.22 Copying and Moving Folders	441
12.23 Deleting Messages and Folders	443
12.24 Creating New Message Fields	444
12.25 Retrieving an Address Book Recipient	447
12.26 Creating Recipient Entries	451
12.27 Adding a Distribution List	453

Chapter 13: Data Access455

ODBC	455
OLE DB	455
Using ADO	456
13.1 Data Source Name Connection Strings	458
13.2 File DSN Connection	463
13.3 DSN-Less Connection Strings	465
13.4 Opening a Secure Database	470
13.5 Compacting Access Databases	473
13.6 Querying a Table	478
13.7 Opening a Table for Writing	482
13.8 Manipulating a Text File	486
13.9 Accessing Excel Data	488
13.10 Querying the Index Server	491
13.11 Adding Data	493
13.12 Updating Data	496
13.13 Accessing HTML Data	498
13.14 Deleting Data	502
13.15 Accessing Internet Resources	503
13.16 Exporting Data	513
13.17 Importing Data	515
13.18 Executing a Stored Procedure	530
13.19 Executing an Access Parameter Query	534
13.20 Processing Multiple Recordsets	536
13.21 Modifying Command Results	537
13.22 Returning a Parameter Value from a Stored Procedure	539
13.23 Transaction Processing	550

Chapter 14: System Administration	553
14.1 Setting Domain Properties	554
14.2 Determining a Computer's OS	557
14.3 Listing Users	558
14.4 Creating a New User	560
14.5 Listing Object Properties	564
14.6 Setting Object Properties	567
14.7 Setting Multivalued Properties	579
14.8 Deleting a User	581
14.9 Setting User Logon Time	583
14.10 Limiting Computer Access	588
14.11 Setting User Flags	589
14.12 Listing Groups	591
14.13 Creating or Deleting a User Group	592
14.14 Adding a User or Group to a Group	595
14.15 Determining Group Membership	596
14.16 Querying Active Directory Values	598
14.17 Controlling NT Services	603
14.18 Listing Connected Resources	609
14.19 Determining User RAS Access	611
14.20 Listing Network Shares	613
14.21 Creating or Deleting a Network Share	615
14.22 Print Queue Operations	616
14.23 Listing Print Jobs	619
 Chapter 15: Internet Information Server	 623
15.1 Backing Up and Restoring IIS Configuration Information	624
15.2 Listing Web Sites	630
15.3 Creating a Site	634
15.4 Starting an IIS Site	641
15.5 Deleting a Site	642
15.6 Creating Virtual Web Directories	643
15.7 Setting File and Directory Properties	645
15.8 Creating a Web Directory Application	652
15.9 Maintaining Server Bindings	654
15.10 Setting IP Security	656

Chapter 16: Exchange Server	661
16.1 Creating a Mailbox	661
16.2 Setting Mailbox Properties	676
16.3 Setting Mailbox Limits	683
16.4 Creating a Custom Recipient	685
16.5 Maintaining Mailbox E-mail Addresses	687
16.6 Creating a Distribution List	691
16.7 Enumerating a Distribution List	693
16.8 Creating a Recipients Container	695
16.9 Deleting an Exchange Object	697
16.10 Searching an Exchange Server	699
 Chapter 17: Security	 705
17.1 Setting NT Share Security	706
17.2 Setting File Permissions	717
17.3 Setting Directory Security	722
17.4 Changing User Access to the Exchange Recipients Container	735
17.5 Copying a File with Its Security Settings	738
17.6 Taking Ownership of Files	741
17.7 Setting Active Directory Permissions	742
